

Reflection Questions

1. In your own words, explain Django static files and how Django handles them.
 - a. Static files don't change dynamically in the application. These include Javascript, CSS and images.
2. Look up the following two Django packages on Django's official documentation and/or other trusted sources. Write a brief description of each.

Package	Description
ListView	ListView is a generic class-based view in Django used to display a list of objects from a queryset. It simplifies the process of creating views that list multiple objects, providing built-in pagination, context data, and more. It's commonly used for index pages, lists of items, and search results.
DetailView	DetailView is a generic class-based view in Django used to display a single object in detail. It fetches the object based on the primary key or slug provided in the URL and renders a template with the object's details. This view is typically used for displaying detailed information about an individual object, such as a single blog post, product, or user profile.
