

## Recipe Model

- **Attributes:**

- name: CharField(max\_length=100)
- ingredients: TextField()
- cooking\_time: IntegerField()
- difficulty: CharField(max\_length=10, editable=False)
- instructions: TextField()
- pic: ImageField(upload\_to='recipes', default='no\_picture.jpg')

## Reason for Changes

- **Difficulty Calculation:** The calculate\_difficulty method was added to the save method to dynamically set the difficulty based on the cooking\_time and number of ingredients. This change ensures the difficulty is always correctly calculated and stored.
- **Instructions Formatting:** Updated the way instructions are split and displayed in the template. This involved adding semicolons to separate steps in the instructions field to ensure they are displayed correctly in the HTML template.
- **Consistent Font Styling:** Added CSS styling to the templates to ensure that the font used for the instructions is consistent with the rest of the page.
